

Residence Hall Access Point Connections

The data cable from the wall jack must be connected to the back of the Access Point, if that cable is removed or moved to a different connection, the access point and the 4 network ports will not work.

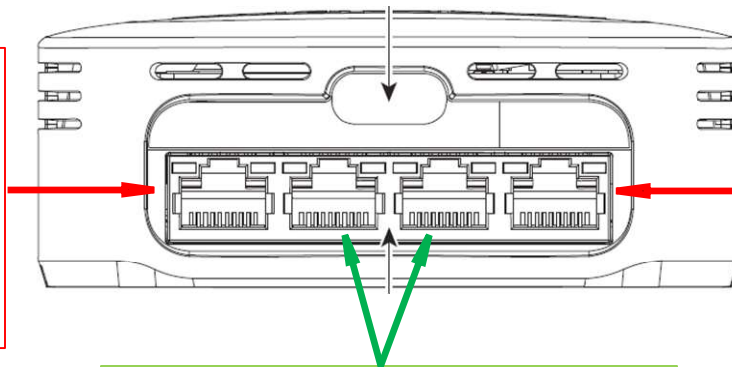

Connecting any other device directly to the wall jack will not work, this connection is specifically for the access point and no other device will work.

When connecting to the Guest wireless, you do not need to accept a terms of use, but those terms have been agreed upon by yourself, when you signed the college's Acceptable Use of Technology Resources policy

Students can use the LMC-Private wireless by entering in their WaveLink user name and password.

LAN1
Should be connected to the PC located behind the TV, connecting any other device to this port will cause the port to be disabled.

LAN4
Should be connected to the TV, connecting any other device to this port will cause the port to be disabled.

LAN2 and LAN 3
These ports can be used to connect user devices such as personal computers or gaming devices.
